A GLOBAL CO2 EMISSION ANALYSIS

The Covid-19 pandemic had far-reaching impacts on energy demand

Coal accounted for over 40% of the overall growth in global CO2 emissions

CO2 emissions are the primary driver of global climatic change

Global warming is a big problem for earth and human as a whole

Green
plants grow
faster with
more CO2

CO2 is the main greenhouse gas responsible for global warming

Use clean energy and use that

energy more

efficiently

Electric vehicles will reduce air pollution

To stop climate change is by reducing their meat and dairy consumption

Drive cars and trucks that use less gasoline

Improve farming and vegan diets

Protecting forest is an important climate solution
